Hardware Configuration and Definition (HCD) for z/OS

Kód kurzu: ES96G

Learn to work with the Hardware Configuration Definition (HCD) function for z/OS, and to plan and initiate dynamic reconfiguration of your zSeries hardware environment. Learn to use the HCD dialogs of z/OS to create an Input/Output (I/O) configuration and dynamically alter the I/O configuration. Learn about the creation of an I/O Configuration Dataset (IOCDS) and various reports that HCD can build. Use a z/OS system to reinforce lecture topics and to practice working with the HCD dialogs. Hands-on lab projects may be done in teams depending on the number of attendees and location.

Pre koho je kurz určený

This course is for people responsible for maintaining the I/O configuration contained in the input/output data files

(IODFs) and input/output configuration data sets (IOCDs) at their z/OS installation.

Čo Vás naučíme

Describe new zSeries processor technology

Code new zSeries processors (z9 to z196)

Code FICON channels and FICON CTCs

Code Coupling Facilities (CF) and CF links

Code cascaded FICON Directors

Create an IODF work file on a z processor from scratch

Use CHPID mapping tool to create a validated work IODF

Use work IODF and create a production IODF

Perform Dynamic I/O changes on a real z/OS system

Build a LOADxx parmlib member for initial program load (IPL)

View configuration graphically

Create appropriate configuration reports

Požadované vstupné znalosti

You should have:
- A basic knowledge of z/OS and I/O configuration

This knowledge can be developed on the job, or by taking Fundamental System Skills in z/OS (ES10A).
