

Red Hat Certified Specialist in OpenShift Advanced Cluster Management Exam

Kód kurzu: EX432

The Red Hat Certified Specialist in OpenShift Advanced Cluster Management exam (EX432) tests the knowledge, skills, and ability to plan, deploy, and manage Red Hat Advanced Cluster Management for Kubernetes in a multi-cluster environment.

Pobočka	Dní	Katalógová cena	ITB
Praha	1	450 €	0
Brno	1	450 €	0
Bratislava	1	450 €	0

Všetky ceny sú uvedené bez DPH.

Termíny kurzu

Dátum	Dní	Cena kurzu	Typ výučby	Jazyk výučby	Lokalita
-------	-----	------------	------------	--------------	----------

Všetky ceny sú uvedené bez DPH.

Pre koho je kurz určený

- Site reliability engineers (SREs), DevOps engineers, cluster engineers, systems administrators, cloud administrators, or cloud engineers focused on planning, designing, and implementing production-grade OpenShift clusters in a multi-cluster environment.
- Site reliability engineers (SREs), cluster engineers, systems administrators, cloud administrators, or cloud engineers working in a multi cluster environment.
- OpenShift Virtualization Administrators who need to manage multiple OpenShift Virtualization clusters at scale.

Čo Vás naučíme

To help you prepare, the exam objectives highlight the task areas you can expect to see covered in the exam. Red Hat reserves the right to add, modify, and remove exam objectives. Such changes will be made public in advance.

As part of this exam, you should be able to perform these tasks:

Manage and deploy Red Hat Advanced Cluster Management for Kubernetes (RHACM)

- Understand how RHACM architecture and components work
- Deploy RHACM using Red Hat OpenShift Container Platform Operator Lifecycle Management
- Install RHACM agents in a managed cluster
- Use RHACM from the web terminal or the command line interface

Manage clusters by using Red Hat Advanced Cluster Management for Kubernetes (RHACM)

- Create, upgrade, import and remove a cluster
- Scale a cluster

Configure access control for multi-cluster management

- Configure objects related to access control in a fleet cluster, such as roles, cluster sets, cluster selectors, and placement rules
- Understand how to use the multi-cluster management dashboard search engine
- Create and manage role-based access controls (RBAC)
- Manipulate policies for groups and users
- Manipulate cluster sets

Deploy and manage policies for multiple clusters

- Understand governance architecture and related components
- Manipulate RHACM policies and associated components

Red Hat Certified Specialist in OpenShift Advanced Cluster Management Exam

- Configure and use the Compliance Operator for multiple clusters
- Understand how Compliance Operator policy cluster resource definitions work and be able to manipulate them
- Troubleshooting issues related to governance

Manage the RHACM observability service

- Understand the RHACM observability architecture
- Enable the observability stack
- Manage the observability stack
- Customize the observability stack

Use Kustomize to manage resources

- Understand how to manage templates
- Manage apps using Kustomize

Manage multi-cluster application lifecycle using GitOps practices

- Be able to work with Git from the CLI
- Be able to integrate with Kustomize
- Organize Git repositories to support GitOps
- Configuring GitOps for application lifecycle management
- Deploy and configure GitOps Operator
- Manipulate applications using Git repositories
- Importing Managed Clusters into Argo CD
- Use the application console to manage and manipulate applications
- Troubleshoot common issues for application lifecycle management

Manage Virtualization Operator

- Understand the Red Hat Virtualization Operator architecture and components
- Deploy the OpenShift Virtualization Operator using GitOps with RHACM
- Deploy and manage Multicluster Virtual Machines with RHACM
- Monitor OpenShift Virtualization with RHACM
- As with all Red Hat performance-based exams, configurations must persist after reboot without intervention.

By passing this exam, you become a Red Hat Certified Specialist in OpenShift Advanced Cluster Management that also counts towards earning a Red Hat Certified Architect (RHCA®).

This exam is based on Red Hat OpenShift Container Platform 4.18 and Red Hat Advanced Cluster Management 2.13

Požadované vstupné znalosti

- Red Hat OpenShift Administration II: Provozování produkčního Kubernetes clusteru (D0280)
 - nebo ekvivalentní zkušenosti
- Red Hat OpenShift Administration III: Škálování nasazení Kubernetes v podniku (D0380)
 - nebo ekvivalentní zkušenost
- Správa virtuálních počítačů s Red Hat OpenShift Virtualization (D0316)
 - nebo ekvivalentní zkušeností.
- Správa více clusterů s Red Hat Advanced Cluster Management for Kubernetes (D0432)
 - nebo ekvivalentní zkušenosti

Príprava

Red Hat encourages you to consider taking Multicluster Management with Red Hat Advanced Cluster Management for Kubernetes (D0432) to help prepare. Attendance in these classes is not required; students may choose to take the exam only.

While attending Red Hat classes can be an important part of your preparation, attending class does not guarantee success on the exam. Previous experience, practice, and native aptitude are also important determinants of success.

Red Hat Certified Specialist in OpenShift Advanced Cluster Management Exam

Many books and other resources on system administration for Red Hat products are available. Red Hat does not endorse any of these materials as preparation guides for exams. Nevertheless, additional reading may be helpful to deepen your understanding.

Výsledky a hodnotenie

Official scores for exams come exclusively from Red Hat Certification Central. Red Hat does not authorize examiners or training partners to report results to candidates directly. Scores on the exam are usually reported within 3 U.S. business days.

Exam results are reported as total scores. Red Hat does not report performance on individual items, nor will it provide additional information upon request.
